## Projects

### Sipeaky - Language Speaking Skills Improvement App

March 2023

The primary goal of this project was to provide users with a seamless and interactive environment where they could practice speaking a foreign language with others who shared the same learning objectives. Key features include:

- Dynamic Language Rooms: Users can create or join language-specific rooms for real-time speaking practice
- Interactive Communication : Users Real-time voice conversations with multimedia controls for an immersive experience
- User-Friendly Customization: Options to set room capacity and choose the language, ensuring a personalized learning journey
- Efficient Room Management: Hosts can manage rooms by kicking users for a focused and constructive learning environment

### Airbnb Clone Project

Oct 2023

I spearheaded the development of an Airbnb clone, prioritizing design excellence for an authentic user experience.

- Implemented seamless sign-up/login, visually appealing property listings, and robust filtering capabilities
- Leveraged technologies including Javascript, React, Bootstrap, SASS, MongoDB, Node.js, Express.js, Sanity, and Netlify
- Showcased proficiency in full-stack development
